PROFESSIONAL SUMMARY

Senior student (10th cycle, last semester) in Systems Engineering, outstanding self-taught learner (upper third), and Full-Stack & Systems Developer with 1.5+ years of professional experience designing, structuring architecture, and implementing highly available, data-driven web platforms and systems applications. Demonstrated ability to lead end-to-end development, from requirements engineering to cloud and systems infrastructure. Expert in the Django/PostgreSQL and FastAPI ecosystems, modern Angular, Rust systems tools, and event-driven cloud architectures with language model integrations.

CORE COMPETENCIES

Full-Stack & Systems

Python & FastAPI

Django & PostgreSQL

Angular (Signals)

Rust & Linux Systems

Firebase & Pub/Sub

Docker & Cloud Run

RAG & AI Integration

WORK EXPERIENCE

Kuantum Feb 2025 - Jun 2026

Full-Stack Developer

Peru

- Sole architect and developer of Kuantum Educa from scratch, preparing students through data-driven simulations.
- Designed a highly scalable, event-driven backend using Firebase Cloud Functions and Pub/Sub to asynchronously process and aggregate thousands of simulation results during peak loads.
- Developed a dedicated microservice with FastAPI (Python) and SQL Connect to securely process attempts and payment transactions with PostgreSQL (pgvector/HNSW), containerized with Docker and deployed via Google Cloud Run.
- Orchestrated semantic search and RAG for career matching using Firebase Cloud Functions for scalable AI inference, connecting student RIASEC profiles with over 200 academic programs.
- Developed an administrative panel with Angular 19, utilizing Signals for state management, server-side pagination and search to handle large datasets, and PrimeNG charts.

E-learning Platform 'Comienza Pro' Aug 2025 - Nov 2025

Full-Stack Developer

Peru

- Led implementation, deployment, and administration of Comienza Pro, managing server provisioning, configuration, and continuous maintenance in the Hetzner cloud.
- Customized Moodle environment and platform configuration to provide an intuitive learning experience for 9 distinct courses.

FEATURED PROJECTS

SysMon Systems Companion

Built a personal systems companion tool that turns a Nintendo 3DS into a live PC hardware monitor and touch macro pad over Wi-Fi, featuring live CPU/GPU/RAM telemetry and process management.
Rust, C, Python, WebSockets, Linux

Papeletas Automáticas Computer Vision

Developed a proof of concept for an automated digital traffic ticket system with vehicle license plate recognition using Python, YOLOv5, and PyQt6.
Python, YOLOv5, PyQt6, easyocr

AI Assistant For Class Desktop Voice AI

Built a local AI assistant desktop application using PyQt6 and the OpenAI API, with background worker threads for speech ingestion.

EDUCATION

Systems and Informatics Engineering (10th cycle, upper third) [Universidad de Huánuco](#) 2021 - Present

TECHNICAL SKILLS

Backend & Databases: Django & DRF, FastAPI, PostgreSQL (pgvector), Firebase (Functions, Firestore, Realtime DB, Data Connect), Python, NestJS, NodeJS, TypeScript, RESTful APIs, SQLite

Systems & Frontend: Rust (axum, tokio, evdev), Angular, HTML5, CSS3, JavaScript, TypeScript, PrimeNG, TailwindCSS, PyQt6

DevOps & Tools: Git, Docker, Hetzner, GCP (Cloud Run, Vertex AI), RAG, Ollama, Embeddings, HNSW Indexes, Firebase Emulators
